Proposed QA Control Review / participation and decision rights

PEOPLE Who is affected?	RELATIONSHIPS Who contributes and decides?	NEXT CONVERSATIONS What needs confirmation?
----------------------------	---	--

1. People and roles

QA and night-shift operators

Nia only supervises night QA and can only describe how the cell is used during that night shift. Operators do the checking and records, but their statement wasn't gathered yet, and they were not yet selected for interviews. Nia proposed that a night-shift operator can participate in checking the workflow.

Engineering

Elias can explain the command and scheduler records. He needs the read-only exports with source details, and asks for the record custodian to join a discussion. Elias can advise in regards to technicalities, but he cannot identify the origin of the problem so far.

Operations

Mara Ilyan, the Production Operations Manager, will review my recommendation, though her request doesn't approve the project. She asks the analyst to distiguish people doing the work, and can also seek for contact information.

Sponsor and record custodian

The record custodian is listed in the proposed QA Control Review but has no named contact, and has no confirmation that anyone accepted that responsibility. The authorizing sponsor can authorize the proposed work within the approval process, and Operations routes recommendations to that role, but the holder, their specific limits and any signed approval are not identified, so all three need confirming. QA, Engineering and Operations are named as participants. None of them is confirmed as the designated contact, and a meeting-list entry is not evidence of consent, availability, ownership or decision authority. Their authority also needs confirming. None of the three is shown to approve funding or a restart, and Elias's ownership of any records is unestablished. The night-shift operator is likewise unselected.

2. Relationships and next steps

Competing needs and tradeoff

Mara proposes a daytime meeting, while Nia asked for night-shift operators to participate. I would propose a late-afternoon or early evening meeting where both sides can possibly join and talk about the problem

Consultation plan

Interview Night shift operators in regards to the operations that was done during that night when MR-17 malfunctioned. Ask them what happened to gather information that will help the investigation. The best thing to conduct an interview with them is during their shift at night.

Missing voices and validation

The Record Custodian and Night-shift Operators were not interviewed or asked regarding the incident that happened. I should seek confirmation, and will talk to these people to gather more information about the MR-17 incident.

Next step toward requirements

Roles and Participants that are written in the Participation and authority register must be confirmed first before detailed requirements interviews. By mapping out the roles and participants, and by offering the right schedule for them to be present based on their availability, we can certainly invite the people and participants that we need.

3. Book evidence connection

Book form connection

The tools that I have helped me in creating this map. Through note taking, recording, and keeping evidences that can help me come up to a conclusion. An example would be the notes embedded in each interviews in the Meridian Forge, helped me in recording my statements and the important details I need to keep.
