CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Learner name not entered · Revision 2304

R-01 · functional

Requirement: The system must show whether an appointment is "slot waiting final confirmation" or "visitors arrived but cannot move forward"

Source: W04-S01 · Dana Ruiz

Rationale: Scheduling and Intake both use “held” for different situations, The visitor had a confirmation, but the queue showed “held, not ready,” and staff could not tell which meaning applied

Acceptance check: Given one appointment awaiting final confirmation and one visitor who has arrived but cannot proceed, when intake staff open the queue, then each appointment shows its own distinct label and the two cannot be confused.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: "Held" will no longer be used as a single status. Two separate statuses will be used. “Awaiting confirmation” means a slot is waiting for final confirmation. "Arrived, cannot proceed” means a visitor has arrived but cannot move forward (Intake’s meaning)

R-02 · user

Requirement: When status exception occurs, intake staff must be able to see the condition applies without the need of confirming what the word held really means.

Source: W04-S01 · Dana Ruiz

Rationale: To further streamline the process, and to avoid confusions

Acceptance check: Given an appointment in an exception status, when an intake staff views it, a staff member can state the next step without the need of contacting anyone.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: "Held" will no longer be used as a single status. Two separate statuses will be used. “Awaiting confirmation” means a slot is waiting for final confirmation. "Arrived, cannot proceed” means a visitor has arrived but cannot move forward (Intake’s meaning)

R-03 · business

Requirement: The Clinic can offer a same-day slot only after a room and a clinician is ready.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Base on what Lean said, an open time in the calendar is not a guarantee that a room and a clinician is ready. Offering a slot without both would promise visitors a scheduled time without a confirmation on whether they can be accomodated or not.

Acceptance check: A confirmed appointment, when its readiness changes, then the current readiness status is shown to the staff and to the affected visitor.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A confirmed appointment is not automatically ready. Readiness is confirmed only when a room and a qualified clinician are both available.

R-04 · functional

Requirement: When the readiness status changes, the system must update readiness state and the visitor must be informed about the situation.

Source: W04-S02 · Dr. Lena Okafor

Rationale: Lena said that affected staff and visitor must have and updated expectation

Acceptance check: A confirmed appointment, when its readiness changes, then the current readiness status is shown to the staff and to the affected visitor.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A confirmed appointment is not automatically ready. Readiness is confirmed only when a room and a qualified clinician are both available.

R-05 · user

Requirement: Authorized staff must be able to see the visitor’s language, communication preference, and approved support needs, and any support request must stay attached to the appointment, through confirmation, rescheduling, and check-in

Source: W04-S03 · Priya Shah

Rationale: The record shows a communication preference visible to the access team but missing from the intake queue

Acceptance check: Given a visitor with a recorded communication preference and an open support request, when authorized staff handle the appointment at confirmation, rescheduling, and check-in, then the preference and the support request are visible at each step, including in the intake queue.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: A visitor’s language, communication preference, and approved support needs are recorded once and stay attached to the appointment through confirmation, rescheduling, and check-in.

R-06 · constraint

Requirement: Every visitor must have an equivalent phone or staff-assisted route for confirmation, rescheduling, and check-in, so access to the service does not depend on one digital channel.

Source: W04-S03 · Priya Shah

Rationale: Priya said the process needs an equivalent phone or staff-assisted route and that access cannot depend on one digital channel. Without it, visitors who cannot use the portal could be excluded from the service.

Acceptance check: Given a visitor who cannot use the portal, when they confirm, reschedule, or check in by phone or with staff help, then they complete each step and reach the same outcome as a portal user.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: A visitor’s language, communication preference, and approved support needs are recorded once and stay attached to the appointment through confirmation, rescheduling, and check-in.

R-07 · nonfunctional

Requirement: Shared displays must show only the minimum status information staff need for the task, and detailed information must be shown only according to the staff member’s role and authorized access.

Source: W04-S04 · Jordan Kim

Rationale: Jordan said staff need enough information to act, but shared displays should not expose details they do not need.

Acceptance check: When each staff member views the same appointment, the display shows only the minimum status needed for the task

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays shows only minimum status staff need for the task, and detailed information only according to a staff member's role.

R-08 · functional

Requirement: When a status changes, the system must retain who made the change, the previous value, the new value, and the time of the change, and keep that history available during an exception review.

Source: W04-S04 · Jordan Kim

Rationale: Jordan said a reliable history is needed when a status changes.

Acceptance check: If a status change, when a reviewer opens the history, it will show who made the changes.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays shows only minimum status staff need for the task, and detailed information only according to a staff member's role.

Professional Guidance Assessment

IIBA: IIBA is a professional association that supports business analysis. It publishes the BABOK Guide, which describes how analysts elicit, analyze, and validate requirements.

ISO/IEC/IEEE 29148: Together, they publish ISO/IEC/IEEE 29148, which sets out requirements engineering processes and what makes an individual requirement good

PMI: PMI focuses on project delivery, such as scope, schedule, cost, and managing the work. Week 4 focuses on what the system must do and how to write and validate requirements.

Application: The guidance helped me make R-05 more traceable and checkable. The source record said a support request must follow the appointment, so I added that to the requirement.

Prepared in Command Nexus. Canvas remains the official submission point.
