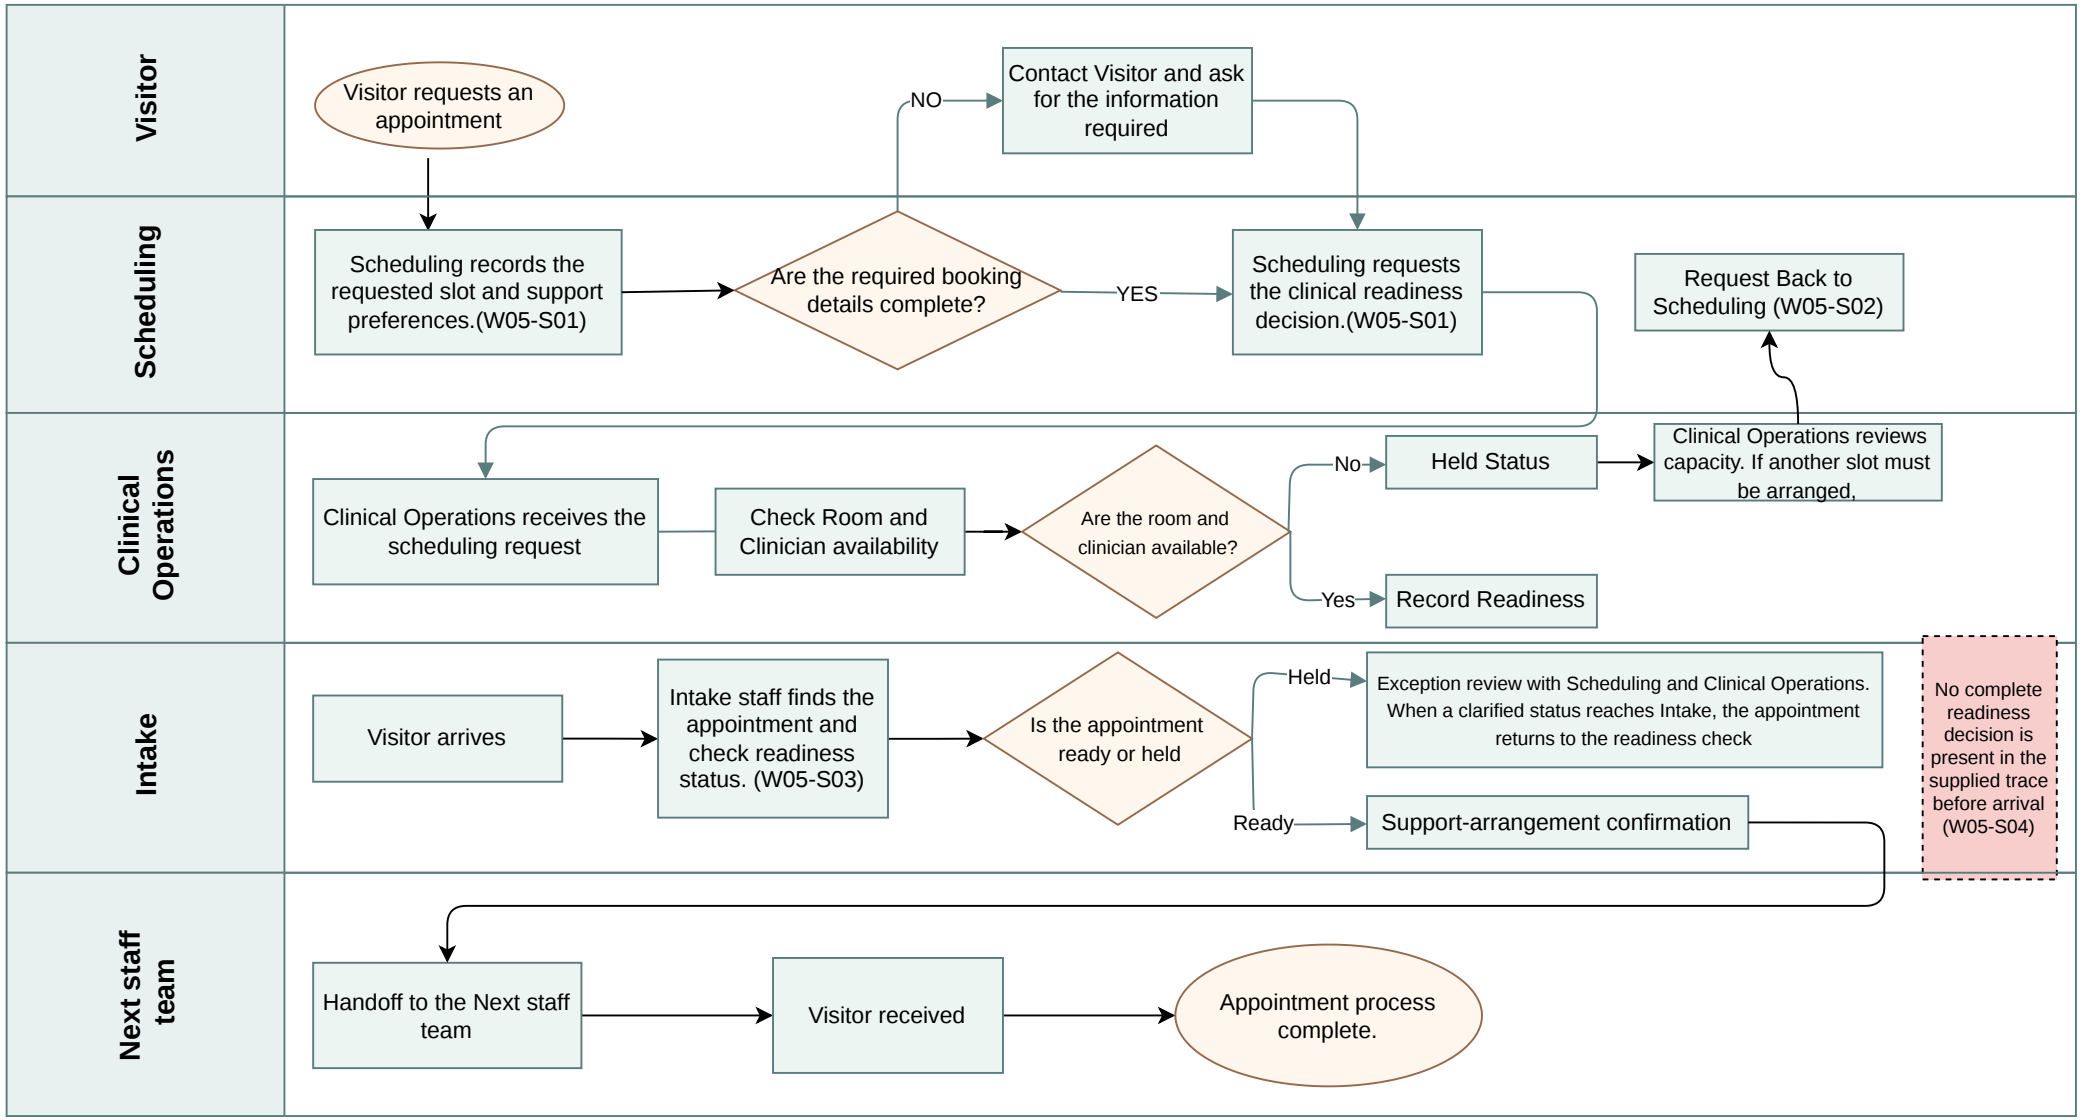
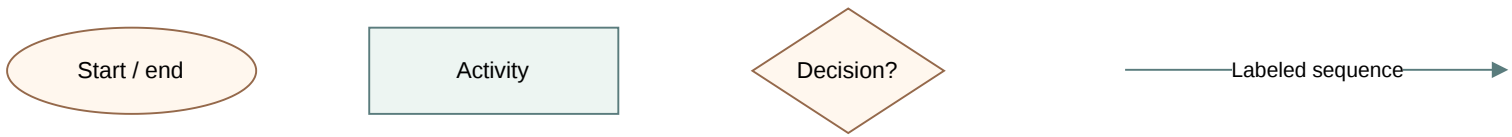
CIT 140 · Week 5 | Current Appointment Process

Replace this line with your process start and end. Add supported steps and decisions in the responsible role's lane. Label decision branches and source IDs.



Symbol key (copy these shapes into your lanes; they are not case steps)



Week 5 | Scope and Findings

1 · Process scope
Sean Abaniel. This model shows the current appointment process, from a visitor requesting an appointment to the appointment reaching the Next staff team. It covers the roles Visitor, Scheduling, Clinical Operations, Intake and Next staff team. It doesn't cover new software or a redesigned workflow.

2 · Check the two paths
Incident appointment: steps 1–2, then the held slot is recorded and a booking confirmation is issued, the visitor arrives (step 10), Intake displays “held,” and Dana opens exception review (W05-S04). The booking confirmation and Intake’s held display disagree, and the supplied trace shows no completed readiness decision reaching Intake before arrival.

3 · Evidence and model review
No complete readiness decision is present in the supplied trace before arrival (W05-S04).The Visitor arrives without any knowledge on whether they will get an appointment or not

4 · Learning reflection (reuse your Discord paragraph)
Modelling this process showed me that the booking information and the readiness decision are separate records. It also maps out how Cedar Junction Clinic Appointment system works. But base on the map, the visitor arrives without having a clear knowledge if they will have an appointment or not. This could be an issue for the visitor if they arrive early only to be told that their appointment is actually held. By mapping the process, we can truly identify the problem easily, and providing the solution will be easy work.

5 · Portfolio evidence
[Editable model filename and Week05/Evidence/Week05_Discord_Post.png or .jpg. If Discord is unavailable, identify the equivalent reflection used here.]
Save the .drawio file; export both pages as one PDF; check readability; commit and push.
